New MraY gene and enzyme of Pseudomonas aeruginosa, useful in vitro assays for screening antibacterial compounds that target cell wall biosynthesis, particularly for screening antibiotics against Pseudomonads.

Claim 15; Fig 1; 22pp; English.

This sequence represents the Pseudomonas aeruginosa phospho-N-acetylmuramoyl-pentapeptide translocase, designated MraY. The MraY protein is involved in bacterial cell wall biosynthesis. It catalyses the first step of the membrane cycle of peptidoglycan biosynthesis, i.e., the transfer of an N-acetylmuramic acid peptido lyon a bactoprenol phosphate carrier molecule. The MraY protein is useful in in vitro assays to screen for antiparterial compounds that target cell wall biosynthesis. Inhibitors of the MraY protein are useful in preventing the growth of Pseudomonads and other G+C rich bacteria. Pseudomonas aeruginosa is an opportunistic pathogen which causes infections in patients with burns,

The invention relates to an isolated mucleic acid comprising any one of the invention relates to an isolated mucleic acid inhibited by the antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated contained by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contributes the proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for challed for proliferation, or that inhibits callular proliferation; (8) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acter, (9) manufacturing an antibiotic; (10) profiling a compound a activity; (11) a culture comprising strains in which the gene or organism. The artiture of an organism. The artiture of a compound that inhibits the proliferation of an organism. The artiture of a compound that inhibits the compound and proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for molecules for rational confidence or proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not format directly from WIPO at the print proliferation for the print proliferation and profilerati New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 67901; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the RESULT 4

Sequence 360 AA;

Claim 25;

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid containing the vector; (3) an isolated encoding a polypeptide whose expression is inhibited by the antisense conclined to its fragment whose expression is inhibited by the antisense conclined or its fragment whose expression is inhibited by the antisense conclined to its fragment whose expression is inhibited by the prolypeptide or its fragment whose expression is inhibited by the antisense the activity of antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or that has an activity against a biological pathway broliferation, or that has an activity against a biological pathway required for that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound sactivity; (1) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which confideration of an organism. The antisense nucleic acids required for callular proliferation to isolate and antisense callular acids are useful for termination or proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this proliferation format directly from WIPO at sequences

screening 1 to New antisense nucleic acids, useful for identifying proteins or e for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 77459; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid chidibites proliferation of the nucleic acid (1) a nost cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense collypeptide or its fragment whose expression is inhibited by the antisense proliferation or the activity of apply peptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway to required for proliferation, or that inhibits cellular proliferation; (6) identifying a compound that inhibits on the biological pathway in which a proliferation or required for cellular proliferation or the biological pathway in which a proliferation required for cellular proliferation of an organism acts; (9) manifacturing an antibiotic; (10) profiling a compound; sactivity; (11) a culture comprising strains in which the gene or which each of the strains is present in a culture or collection of an organism. The antisense nucleic acids are useful for the proliferation of an organism. The antisense nucleic acids required for proliferation in cells other than S. aureus, S. typhmurium, C. the target prokaryotic essential genes note: The sequence data for this conficulation but was obtained the larget prokaryotic essential genes. Note: The sequence data for this conficulation, but was obtained for proliferation in cells other than S. aureus, S. typhmurium of the printed for proliferation in cells other than S. aureus, S. typhmurium of the printed specification, but was obtained for proliferation of the printed specification, but was obtained for in electronic format directly from Willey and the sequences.

Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides Claim 2; SEQ ID NO 1968; 1205pp; French

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms, for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphisms for detection/identification

Antisense; prokaryotic essential gene; cell proliferation; drug design. gene #24499 essential ABU38972 standard; protein; 360 encoded by Prokaryotic 2001US-00815242. 2001US-00948993. 2001US-0342923P. 2002US-00072851. 2002US-0362699P. 2002WO-US009107 (first entry) Pasteurella multocida WO200277183-A2. 21-MAR-2001; 2 06-SEP-2001; 2 25-OCT-2001; 2 08-FEB-2002; 2 06-MAR-2002; 2 21-MAR-2002; 19-JUN-2003 03-OCT-2002 ABU38972 Protein RESULT 8

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concluded are:

(2) a vector comprising a promoter operably linked to the nucleic acid.

(3) an isolated concluding the polypeptide of specifically binding the polypeptide of the activity of antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or that has an activity against information; (8) required for proliferation, or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway required for proliferation or that the activity against a biological pathway required for proliferation or the test compound that inhibits proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for molecules for callular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for proversed or called for form part of the printed for term part of the printed 
                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Carr GJ;

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, seruginosa and Entercoccus faccalis. The invention is a also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The be used to screen compounds in rational drug discovery programmes. The cantisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent din of the printed specification, but was obtained in electronic format directly from WIPO at the way obtained in electronic format directly from WIPO at the way obtained in electronic format whipo int/pub/published\_pot\_sequences

Novel nucleic acids encoding proteins required for Escherichia proliferation, useful for screening for antimicrobial agents.

Claim 19; Page 570; 596pp; English.

The present invention describes a purified or isolated nucleic acid sequences given in AAH81202 to AAH81294, where expression of the nucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in genetherapy. Expression of (I) in a microorganism inhibits proliferation of the microorganism, the activity or level of a gene product required for proliferation of the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial growth or proliferation can be used as antisense therapeutics for killing bacteria. In addition to therapeutic inhibit bacterial and sequences complementary to sequences required for proliferation can be used as antisense required for proliferation can be used as diagnostic tools. For example, nucleic acid probes complementary to proliferation-required sequences

```
The invention relates to an isolated mucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
cucleic acid; (2) a host cell containing the vector; (3) an isolated
cucleic acid; (4) an antibody capable of specifically binding
the polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
cucleic prolypeptide; (5) producing the polypeptide; (6) inhibiting cellular
cucleic proliferation or the activity of agene in an operon required for
proliferation or the activity of a gene in an operon required for
cucleic proliferation, or that inhibits oclinar proliferation; (8)
cucleic proliferation, or that inhibits oclinar proliferation of an
corpulate for proliferation, or that inhibits oclinar proliferation of an
corpulate agene required for cellular proliferation of an
corpulate acts; (9) manufacturing an antibiotic; (10) profiling a
corpulation of an organism and present in a culture or collection of
compound; activity; (11) aculture comprising strains in which the extent
corpulation of an organism. The antisense nucleic acids required
corpulation of an organism. The antisense nucleic acids required
corpulation of an organism. The antisense nucleic acids required
corpulated for proliferation to isolate candidate molecules for rational
corpulation or proliferation to isolate candidate molecules for rational
corpulation or a creening for homologous nucleic acids
crequired for proliferation or solate candidate molecules for rational
corpulation or an enganism of a corpulation or isolate candidate molecules for rational
corpulation or an excensing for homologous nucleic acids
crequired for proliferation or solate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid comprising any one of the following antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense controlled by the antisense controlled by the antisense controlled by the antisense controlled by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular controlleration or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of controlleration, or that inhibits cellular proliferation or the biological pathway in which a proliferation or required for cellular proliferation of the product is a gene on which the test compound that inhibits proliferation of an organism acts; (9) mandfacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or underexpressed, (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of an organism. The antisense mucleic acids are useful for identifying proteins or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from Wipp are the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Wang L, Wall D, (ELIT-)

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisonse sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding
                                                                                                      Antisense; prokaryotic essential gene; cell proliferation; drug design
                                                                                                                                                                                                                                                                                                                                                                              Zyskind JW;

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in equired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required for the product lies or a gene on which the test compound that inhibits proliferation of an compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of product is overexpressed or underexpressed; (12) determining the extent confideration of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for required for proliferation in cells changed sureus, S. typhimurium, X. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the provences.

New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids.

Example 3; SEQ ID NO 14075; 511pp; English

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aenraginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins useful feration, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational drug discovery programmes. The present sequence is also useful to screen for momologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent clin not form part of the printed specification, but was obtained in electronic format directly from WHO at

Clones are derived from the Entamoeba histolytica HMI:IMSS sheared
DNA library
Seq priner: M13-Reverse
Class: shotgun
High quality sequence start: 36
High quality sequence stop: 816.
High quality sequence stop: 816.
Lication/Dalifiers

/clone lib="Bentamoeba histolytica Site=1: Bst 1; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond, LiS. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.; The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
